

C-130 System By the Hour

You Deserve Choices

By the hour
By the system
By the aircraft

System By the Hour (SBtH) is a material solution that provides operators and MROs with fixed hourly rates at the system level. The program was developed based on current operator usage statistics and results in increased aircraft availability with predictable fixed costs.

Predictable

SBtH stabilizes maintenance costs and provides a cost effective solution for managing material requirements. Reduced inventory holdings and optimization significantly improves material availability with a substantial reduction in time delays.

Proven

Guaranteed performance based supply chains and asset visibility are essential to successful fleets. Based on demonstrated worldwide performance providing aircraft logistic support programs, SBtH provides key performance indicators that allow for focus on availability versus turn times.
